- the content of the slot is a vector composed of the generic name of the shiny app. Each of the apps listed here must be an exported app of the package. For example, given the value `addons = list(testPkg = c('foo', 'foo2'))`. That means that the package called "testPkg" must provide the four functions: `foo1_ui()`, `foo1_server()` and `foo2_ui()`, `foo2_server()`
- `useModal` A `boolean(1)` that indicates whether to open plot modules in a modal window or not. Default is `TRUE`.
- `verbose` A boolean for verbose mode. Default is `FALSE`.

### Details

- distribution of the missing values per line,
- a bar plot which represents the distribution of the number of missing values (NA) per lines (i.e. proteins) and per conditions,
- Histogram of missing values.
- Variance : Builds a densityplot of the CV of entities in numeric matrix. The CV is calculated for each condition present in the dataset (see the slot 'Condition' in the `colData()` `DataFrame`)
- Heatmap:
